### **COVID-19 Turns Tables on Lake Zurich Life Safety and Security Firm**

Esscoie Systems Help State, Local, and Federal Government Operate Under Any Condition

**Lake Zurich, IL —** (March 2020) Esscoie, a life safety and security integrator serving the Upper Midwest, is a trusted advisor, partner, and provider to the federal government, prestigious school districts and world-class universities, state-of-the-art healthcare facilities and to small private businesses as well as many publicly traded corporations. Esscoie is complying with Governor Pritzker's Executive Order 2020-10 to "Stay at Home", yet as an Essential Business, Esscoie has State, Local and Federal Government clients who operate essential infrastructures that must continue for the safety, health and welfare of all, therefore Esscoie will need to remain operational in accordance with Executive Order 2020-10 throughout the time period specified (through Tuesday, April 7th, 2020).

Esscoie deploys cloud-based solutions for their clients every day and already operate with a robust tele-worker infrastructure, so ceasing non-essential operations at their office locations and switching staff to stay at home will be possible to a certain extent.

Where things will change is in social distancing amongst Esscoie essential staff. The IP based video surveillance cameras, intercom stations and access control systems in the Esscoie office today primarily function as show pieces. Starting Monday, March 23, these systems will now be used just as Esscoie's clients use them, to securely validate essential visitors and remotely grant access to parcel carriers and freight deliveries. This minimizes or eliminates contact between Esscoie staff and those other essential service providers.

Clients who now have empty buildings are looking to accelerate their preventive maintenance and inspection services on their camera, access control and fire alarm systems. And other clients, to the extent possible are pushing to get those disruptive system upgrades done now rather than wait.

Every business is thrown for a loop due to the COVID-19 emergency, and Esscoie no different. Esscoie is grateful to have earned the trust of their clients over the past 15 years. Those clients look to Esscoie to drive and manage the life safety and security of their building environments, while they focus on managing their businesses and constituencies in these times.

## **ABOUT ESSCOE**

Esscoe specializes in life safety and security integrations serving four sectors: federal, education, healthcare, and business. Esscoe provides a full range of services specializing in design, engineering, installation, inspection and repair addressing the needs of all stakeholders. It provides fully integrated platforms; matching unique needs with best-in class solutions bringing together major components and services as one solution.

Esscoe's portfolio of solution offerings encompasses a full-service organization with a team of field technicians and inspectors who are regularly trained and certified by the manufacturers of the systems esscoe furnishes and installs. Service is available 24 / 7 / 365. Founded in 2005, Esscoe continues to be owned by the founding shareholder group. [www.esscoe.com](http://www.esscoe.com)
